Warehouse Procedures

Introduction

This document outlines the standard operating procedures (SOP) for handling goods within the warehouse. All staff must follow these guidelines to ensure safety, accuracy, and efficiency in daily warehouse operations.

Standard Procedures

1. **Receiving Shipments**
   All incoming shipments must be logged into the inventory management system immediately upon arrival.
2. **Initial Inspection**
   Inspect all packages for visible damage before unloading. Any discrepancies or damages must be reported to the warehouse supervisor.
3. **Product Labeling**
   Label all received items with the appropriate SKU and storage location barcode to ensure accurate tracking.
4. **Storage Allocation**
   Store items in their designated zones (Zone A, Zone B, Zone C) based on product category and storage requirements.
5. **Aisle Safety**
   Keep all warehouse aisles, walkways, and emergency exits clear of obstructions at all times.
6. **Equipment Usage**
   Forklifts and lifting equipment may only be operated by certified personnel following safety regulations.
7. **Inventory Control**
   Perform daily cycle counts for high-value inventory and verify quantities against the warehouse management system.
8. **Hazard Reporting**
   Immediately report safety hazards, damaged equipment, or spills to the warehouse supervisor.

Compliance

Failure to comply with these procedures may lead to operational delays, safety risks, or disciplinary action. Employees should consult the warehouse operations manager if they have questions regarding these procedures.
